

Avermann Betonfertigteiletechnik GmbH & Co. KG,
49078 Osnabrück, Germany

New establishment of Avermann Betonfertigteiletechnik GmbH & Co. KG

On 1 January 2017, Avermann made the former company divisions Precast Technology and Environmental Technology independent. The entrepreneurial reason for this is the restructuring of the Avermann Group, as a result of which the Precast Technology and Environmental Technology divisions, which were in any case already organisationally separate, will be independent in future and can act even more assertively in the market.

Chief Executive Officers Dr. Maike Keller and Mr Lutz Pfleger

The Environmental Technology division will continue to be operated by Avermann Maschinenfabrik GmbH & Co. KG. The Precast Technology division, on the other hand, has been continued since the beginning of the year by the newly established Avermann Betonfertigteiletechnik GmbH & Co. KG.

Dr Maike Keller, née Avermann, has been in overall charge of the Avermann Group's businesses since 2013. She will be head of the new company together with Mr Lutz Pfleger. Mr Pfleger has been employed at Avermann for over 25 years, most recently as divisional head of the Precast Technology profit centre and responsible for sales. ■
